

# Unrivaled Colon Cancer Expertise

We are the **only National Cancer Institute-designated cancer center in the region**. Patient outcomes at NCI-designated cancer centers are **25% better** than those of other centers.

Our GI surgical oncologists perform the most complex surgeries using the most **advanced robotic surgery tools**, such as the da Vinci Xi, to minimize patient risk and speed recovery.

We offer **innovative therapies**, such as short-course radiation for rectal cancer and localized radiation for metastatic colon cancer to the liver. Short-Course radiation **dramatically reduces the number of treatments** to 1 week over the standard 6 weeks.

Our **high-risk GI clinic** provides lifetime care for patients who are at increased risk for colon cancer and who have a genetic predisposition, such as Lynch syndrome, for developing the disease.

As a regional leader in precision cancer therapies, our accredited **clinical molecular oncology lab** provides on-site testing and interpretation of complex molecular cancer diagnostic tests. The **molecular tumor board** evaluates the patient's information to tailor a personalized treatment plan.

Our patients have **access to all phases of GI cancer clinical trials**, many of which are not available elsewhere in the region. Our physicians and researchers lead many of these trials by serving as principal investigators.
